- Card Swipe and/or Proximity Chip Readers
- CCTV camera
- ADA 120 Remote Flashing Strobe Units (110 Candela) for the hearing impaired
- Permanent Stamped Braille Unit Labels (not glued on strips)
- Custom Designed Systems available

### DESCRIPTION:

The NPL-3000 telephone entry system enables apartment dwellers to be made aware of visitors wishing to gain entrance to their building.

Components of the system include a stainless steel lobby panel with NPL PCB-16 controller, one NPL-28C for each phone line and an optional NPL-28SW controller for use with an electric door strike or entrance gate system.

The NPL-3000 may be custom sized to cover existing panel holes, eliminating the need to plaster and paint, reducing installation time and cost.

### NPL 3000

NPL-3 (Surface & Flush Mounting)

### SYSTEM OPERATION:

The system operates using the existing telephone system. Visitors press the unit number button on the entrance panel to announce their arrival, which rings the corresponding unit's telephone, and establishes two-way communication when the telephone is answered.

If an electric door strike or entry gate is utilized their activation is accomplished by pressing the \* key on the units telephone key pad. (Must use optional NPL-28SW controller.)

### MOUNTING SYSTEMS & DIMENSIONS

Specify either surface (standard) or flush mounting (consult Mfg.). Flush mounting is accomplished using a back box; surface mounting uses factory-supplied brackets.

Part #: NPL – 3 for up 12 units (6" x 18")

Part #: NPL – 5 for up 34 units (12" x 18")

Part #: NPL – 7 for up 300 units (size varies)

NOTE: (For postal lock installation add 3 inches to the panel length)
